5 questions to ask before you migrate.

Legacy database or ERP data, these answers decide whether your migration lands safely.

BURQ TECHNOLOGIES

01

What will it really cost?

Licensing, infrastructure, egress, effort and downtime should be mapped **before** you sign, not discovered halfway through.

Ask for an assessment that names the cost drivers.

02

Where does our data sit during the move?

In the UAE and Saudi Arabia, data rules matter. Your partner should work with **local data control**, not ship your records abroad.

Ask where every copy of your data will live.

03

How will you prove nothing was lost?

Row counts, checksums and totals, checked for **every table** and handed over in a signed proof pack.

“It looks fine” is not evidence.

04

Who signs off the result?

AI can cut the effort. A **senior expert** should still review the work and sign off the outcome.

Ask for a named person, not a tool.

05

Who makes the cutover call?

A rehearsed cutover with a **rollback plan**, and your team makes the go or no-go decision.

You stay in control of the switch.

NEXT STEP

Planning a migration? Start with one table.

Share one table. A Burq Expert sends back a data profile, a draft mapping and the risks to plan for.
